Logotype Concept

## Hyperloot Protocol

# Decentralized P2P marketplace and ownership solution for in-game items.

A protocol for safe and quick transfer of in-game items into crypto-assets making them tradable (like bitcoin).

Our aim is to lower the entry barrier and let all of the 2,6 billion gaming community trade on a 150 trillion crypto market.

### So how does it work?

A developer embeds Hyperloot SDK and wallet into the game. It allows to emit in-game items as Ethereum network tokens. Doing so, in turn, allows for trade and storage on any marketplace or exchange as well as within the game.

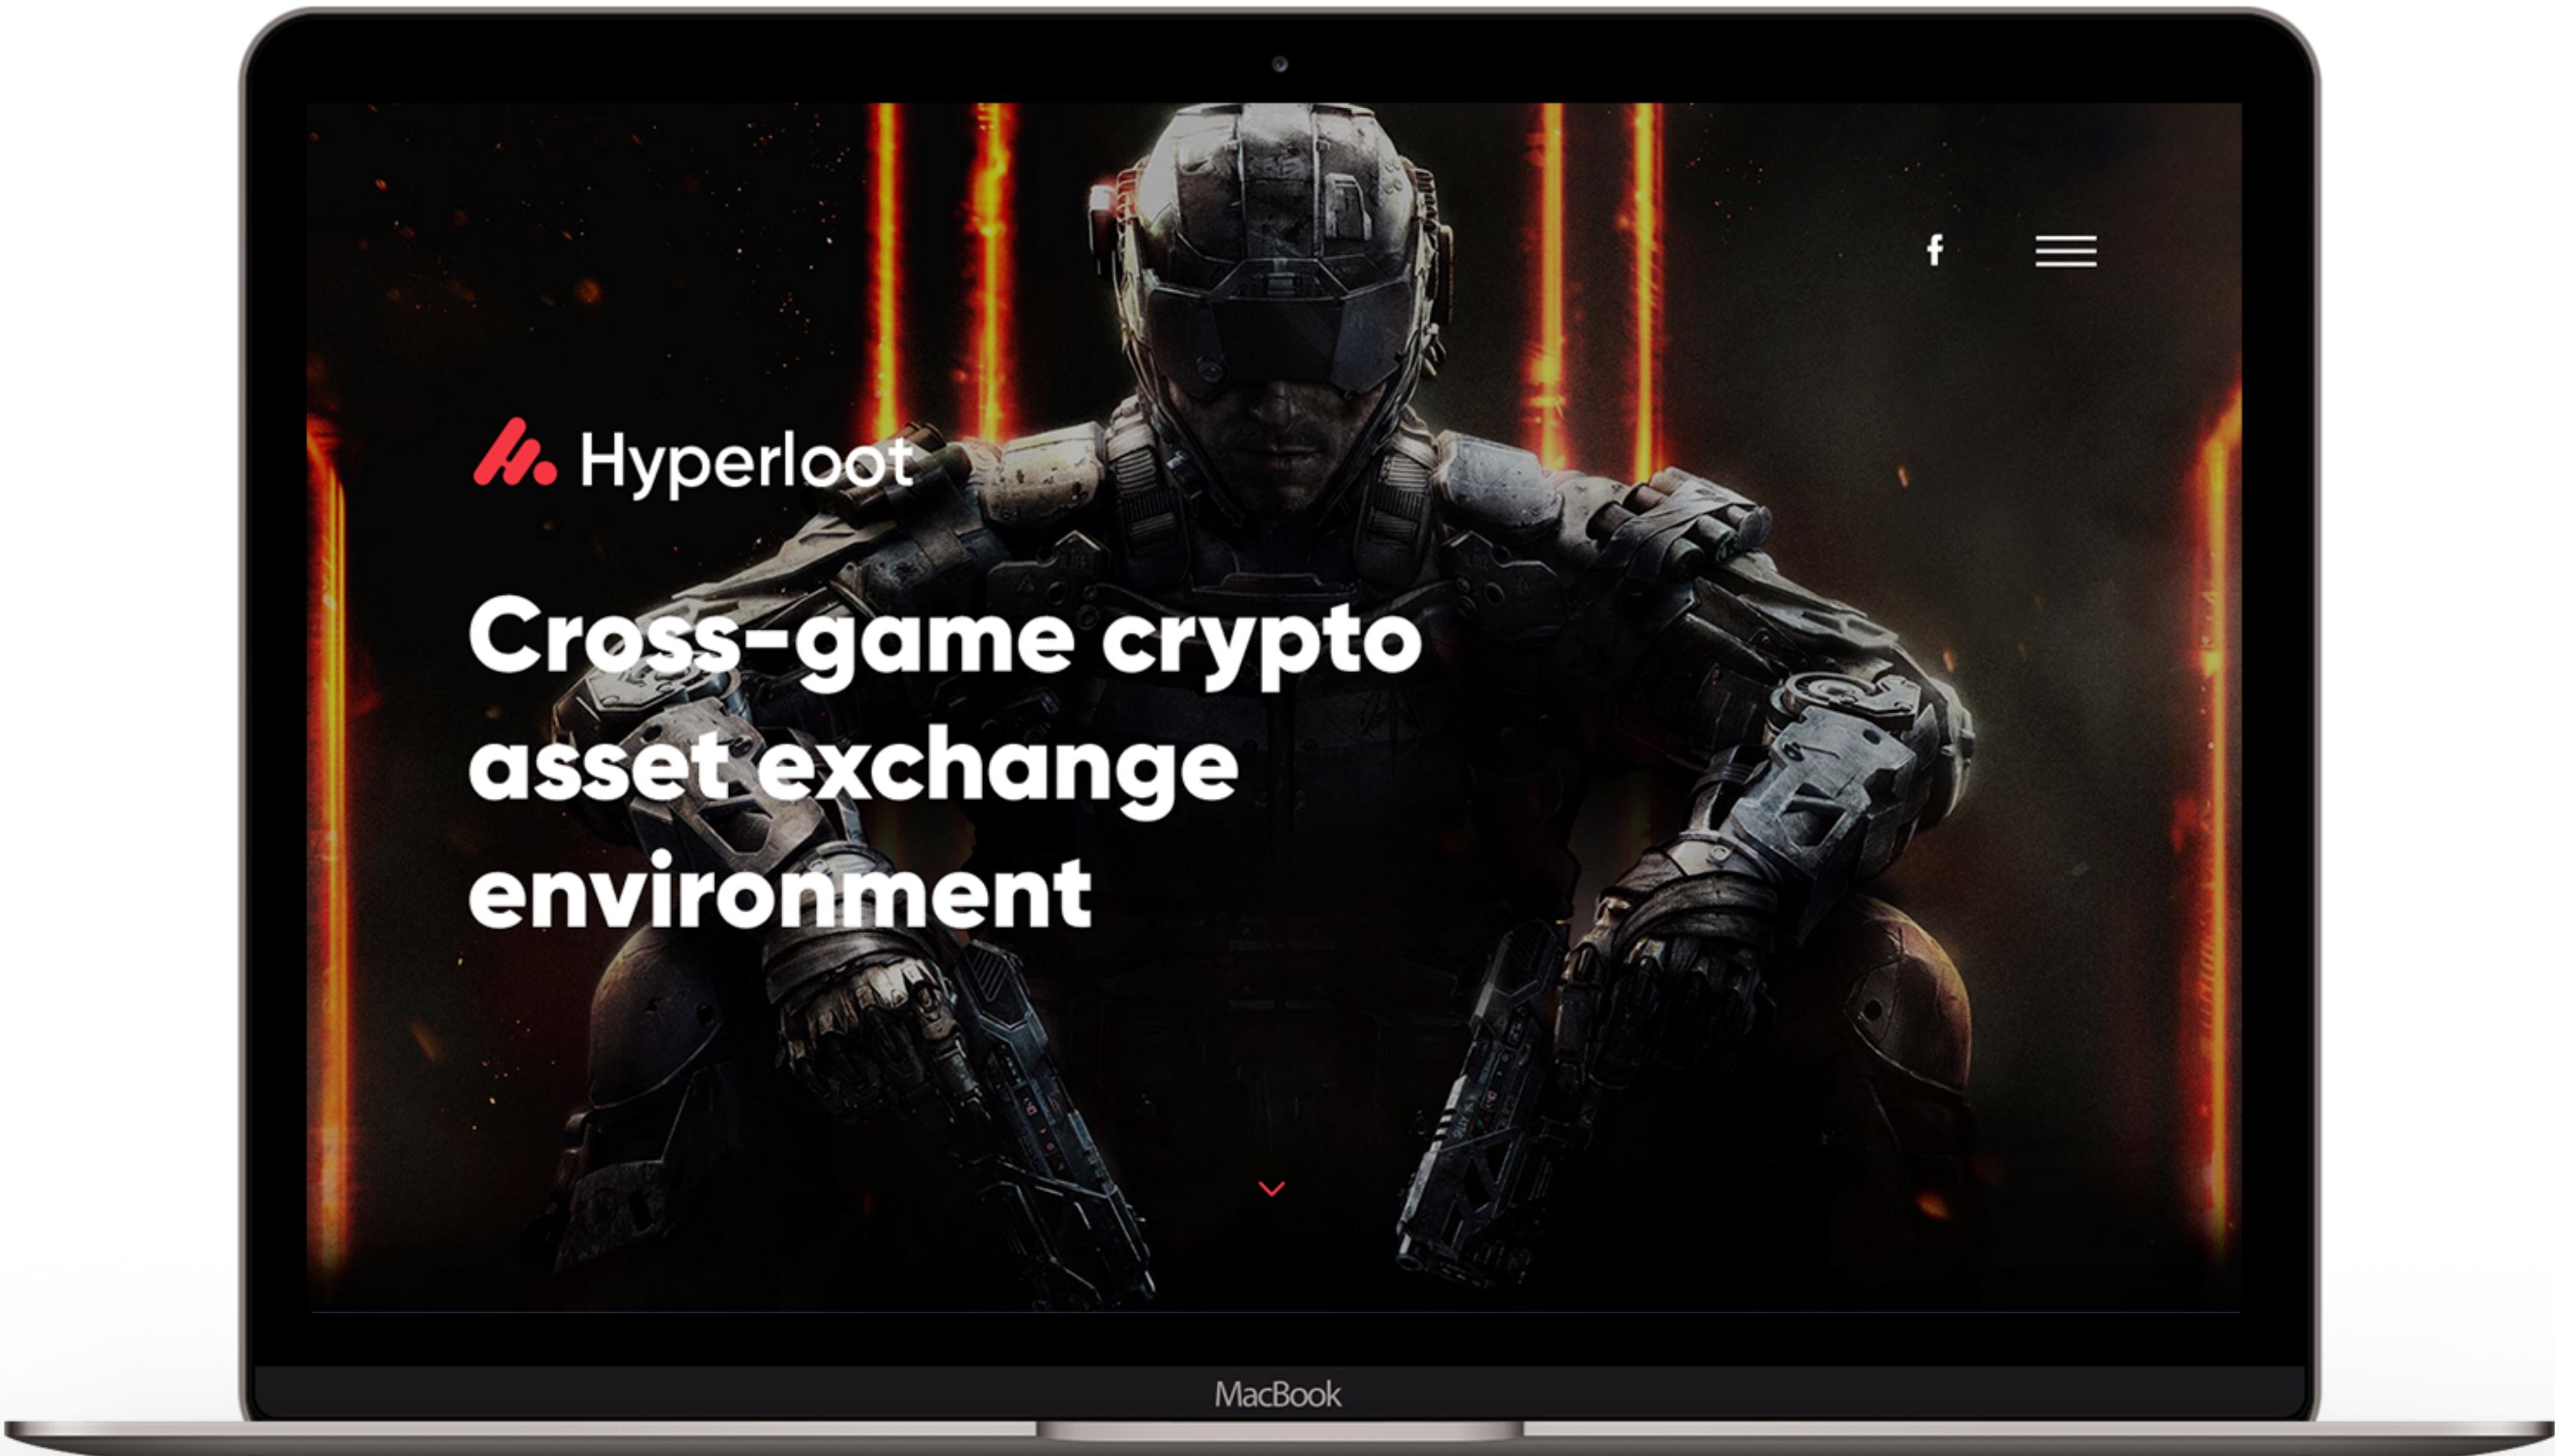

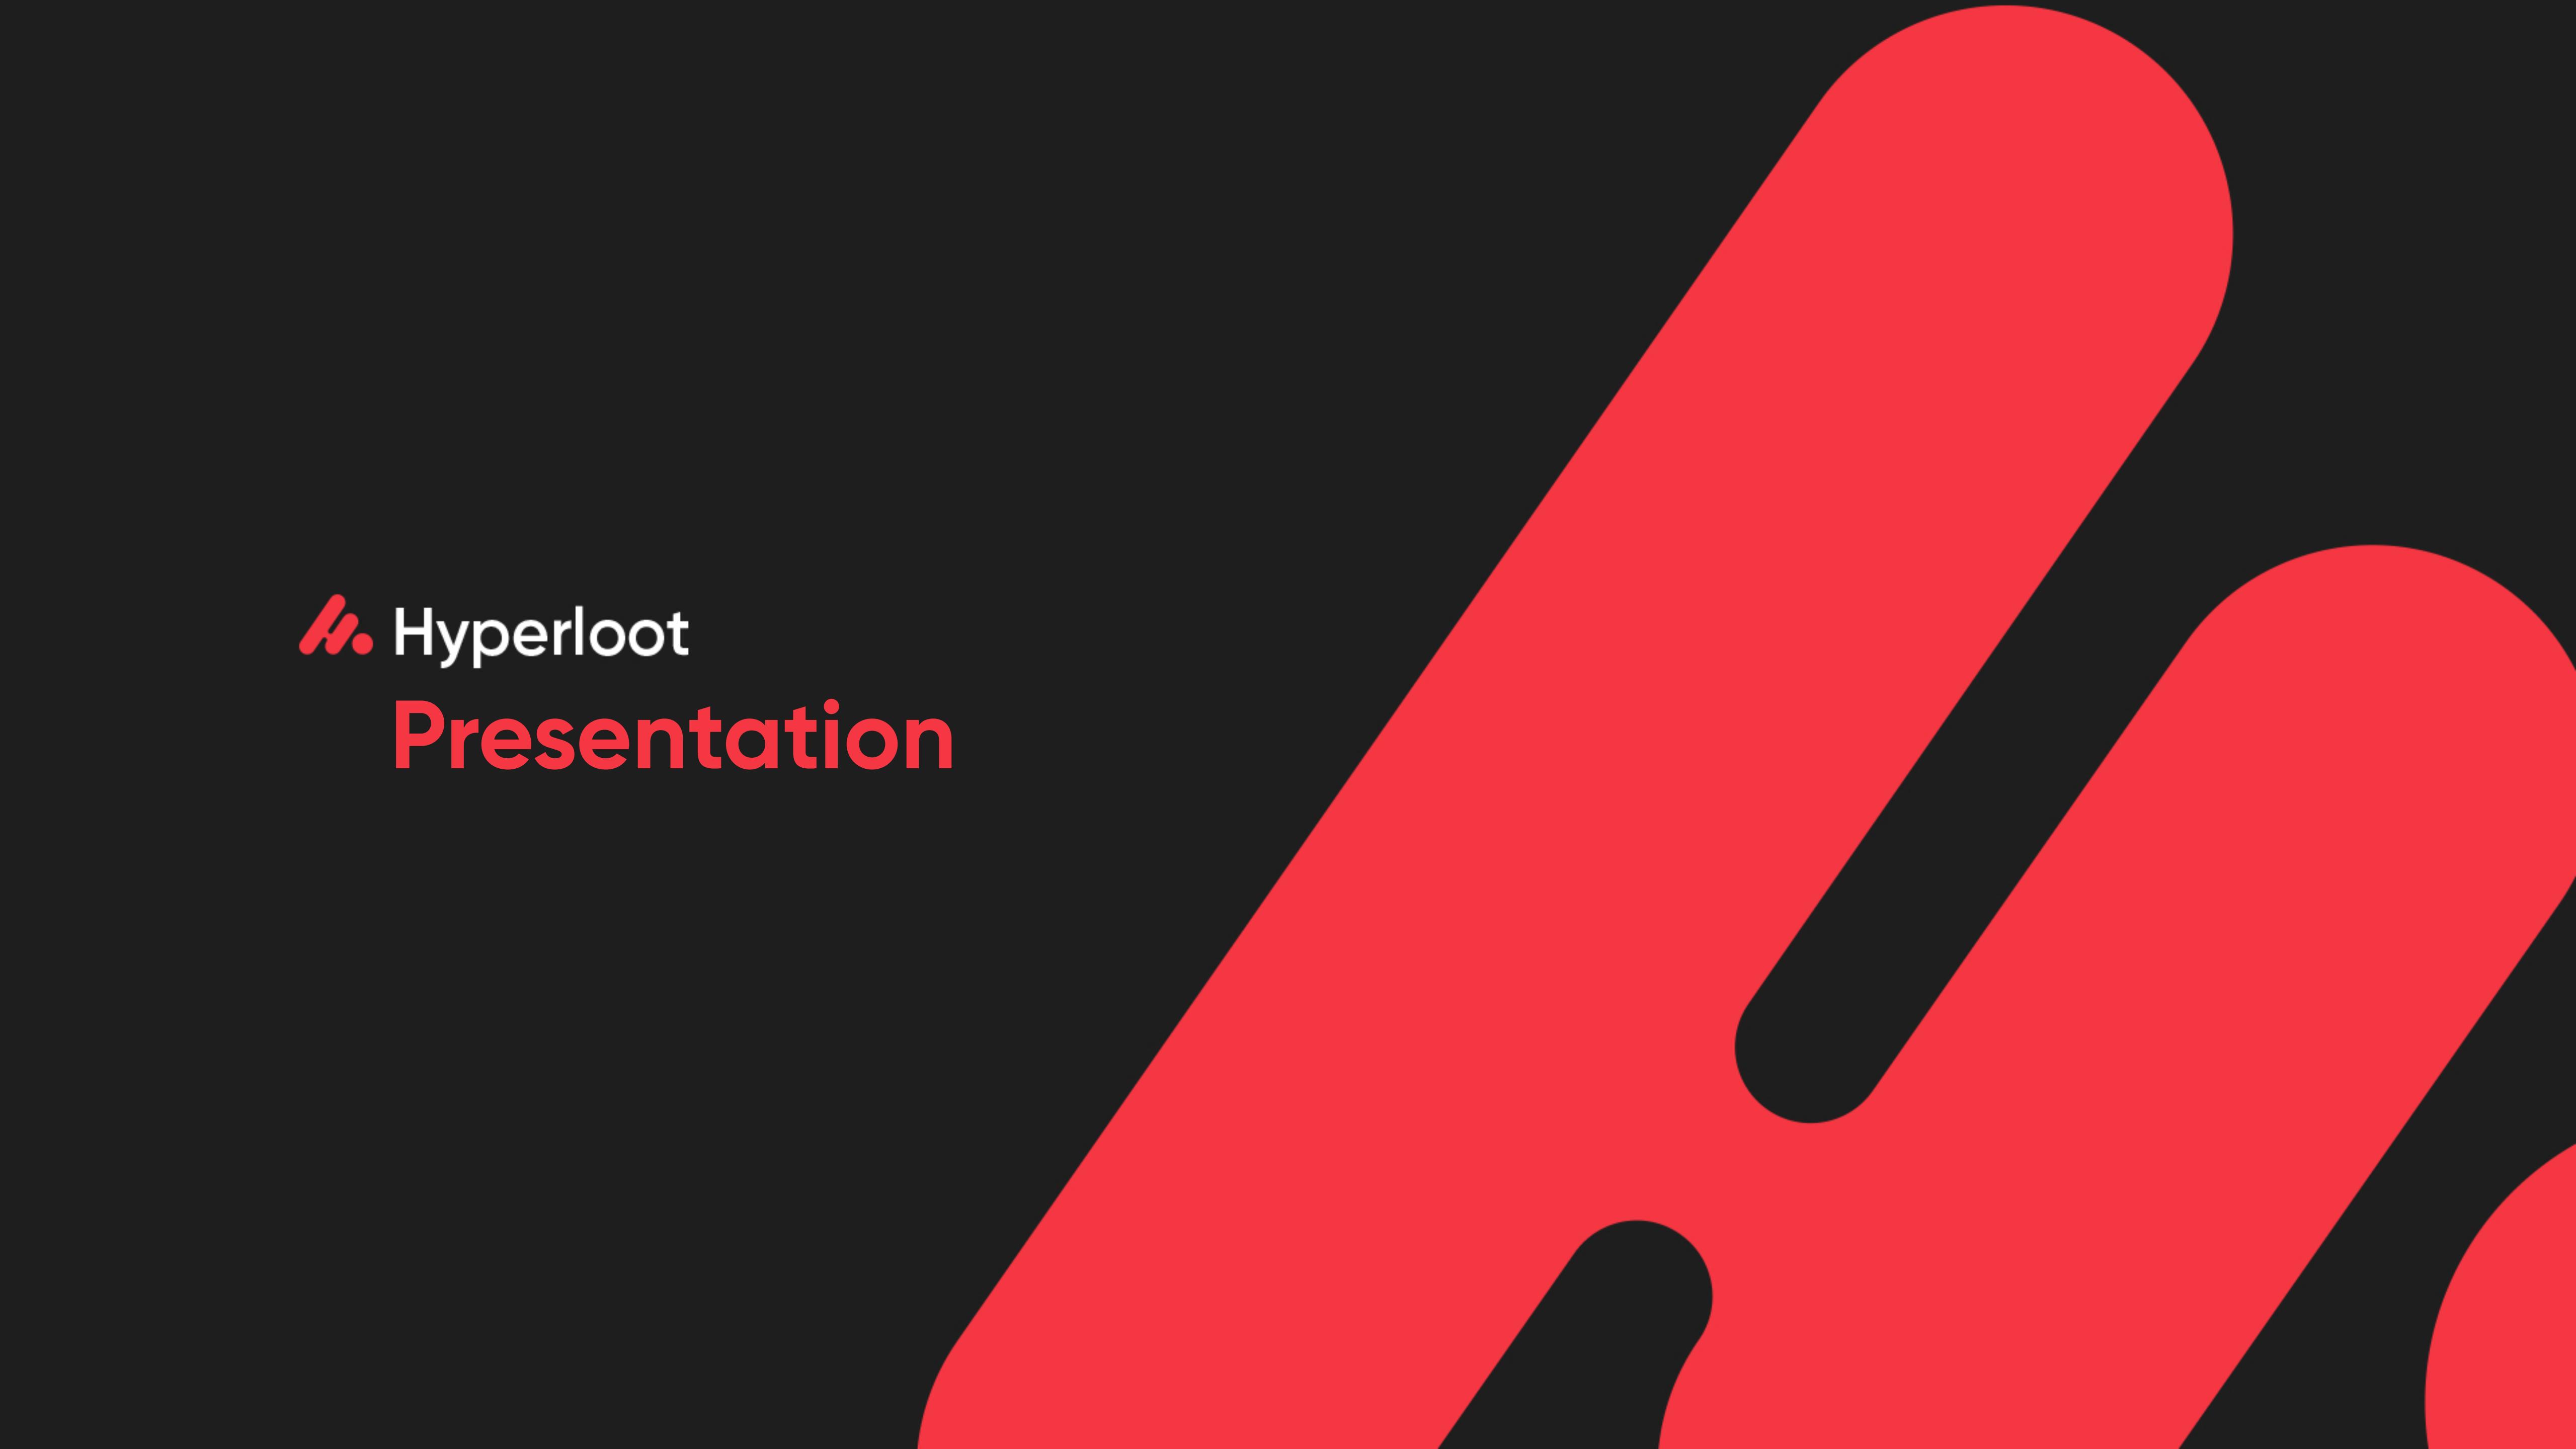

# Hyperloot Pattern

 Hyperloot

**Cross-game crypto  
asset exchange  
environment**

The background features a dark gray or black surface with several large, organic, rounded shapes in a bright red color. These shapes vary in size and overlap, creating a sense of depth and movement. One shape is positioned in the upper right quadrant, another is a diagonal band across the middle, and others are located in the lower right and bottom right corners.
